MOULOUD SERIR

Full-Stack AI Developer | LLM Agents (n8n), RAG, React/Next.js, Node.js, Python

Sherbrooke, QC (available in Montréal) • 819-674-2037 • mouloudserir24@gmail.com

SUMMARY

Bilingual CS student graduating Dec 2026, passionate about AI agents and how AI is reshaping development workflows. Across three internships, I built agents that cut a BI report from about 20 hours of work to a few minutes, voice agents and skills for AI coding agents. I want to build products where agents save teams real time. Available from January 2027.

PROFESSIONAL EXPERIENCE

Intelligence Industrielle — Montréal, QC

Software Engineering Intern (second internship) — May 2026 – Aug 2026

TypeScript | React | Next.js | Node.js | MongoDB | n8n | BigQuery | Gemini Live | Playwright

- Built, with my supervisor's feedback, an app where AI agents (n8n) create self-contained, shareable, versioned BI reports edited via an IDE-style chat: **a report that took about 20 hours of work is ready in 5 to 30 min**.
- Developed **7 client-facing BI reports** with the company's BI department, one every 2 weeks.
- Redesigned the UI/UX of a project lifecycle app: agent router, two real-time voice agents (live brainstorming; navigation launching generations), tool calls (operating the app, chaining generations, updating an artifact), versioned generations.
- Redesigned the UI/UX of an internal user management app (admin gateway): complementary features, simpler user flows.
- Rapidly prototyped apps and concepts as single-file HTML for demos and proofs of concept, **sometimes in a few hours**; designed skills for AI coding agents that speed up this prototyping and the conversion to Next.js or Vite in defined steps.

Software Engineering Intern — Sep 2025 – Dec 2025

TypeScript | React | Next.js | MongoDB | n8n | Airtable | Playwright

- Built v1 of a project lifecycle tool with LLM agents, **adopted across company products**.
- Built an AI image generation and editing app on a node-based canvas (generation, image fusion, edits).
- Wrote Playwright E2E tests and developed with AI coding agents (Claude Code, Codex, Gemini CLI).

Université de Sherbrooke — Sherbrooke, QC

Research Assistant – Spatio-temporal Forecasting — Sep 2026 – Present

Supervisor: Prof. Djemel Ziou | Python | ST-LLM+

- Forecasting emergency calls per county (MRC) and 8-hour shift with a spatio-temporal LLM (demographics, weather, calendar).

Teaching Assistant – IFT320 Operating Systems — Jun 2026 – Aug 2026

Lecturer: Mikael Fortin | C | Linux

- Graded assignments for **38 students**, with feedback on synchronization, concurrency and code quality.

Research Assistant – Application Development — Feb 2026 – May 2026

Supervisor: Prof. Djemel Ziou | React | Three.js | D3.js | WebXR

- Built a curriculum exploration app: 3D graph, grid views, AI assistant limited to controlled actions.
- Built an ETL pipeline for a CCSLL application in March 2026 (consulting contract).

Borealis — Magog, QC • Remote

Web Developer Intern — Jan 2025 – Apr 2025

JavaScript | SQL | XML | Jira

- Delivered client-requested features from Jira tickets; traced and fixed a recurring interface crash (SQL/XML patches).

PROJECTS

Shared Infrastructure to Launch Apps Quickly – Personal Project — Oct 2026 – Present

- A base to launch apps without rebuilding the backend: one GitHub repo per app (template repo), shared database and auth on two Supabase projects with per-app isolation, Cloudflare Pages frontends, a guide for AI agents.

Nexora, AI-Augmented Learning Platform – Capstone Project — Sep 2026 – Present

Supervisor: Prof. Nadia Tahiri • IFT596, team of 5 • web app in development

- Web app: courses, notes, calendar and a course-grounded AI tutor (RAG) that cites its sources, controlled by professors.
- Dashboard of the most misunderstood concepts and an agent that generates diagrams, summaries and quizzes for professors.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Java, C#, C/C++, Bash/Linux
AI & Agents: LLMs, RAG, embeddings, vector search, MCP, voice agents, tool calls, n8n, LangGraph, LangChain, PyTorch
Full-Stack: React, Next.js, Vite, Node.js, REST APIs, MongoDB, PostgreSQL, Supabase, BigQuery, Playwright, TDD
Cloud & DevOps: Google Cloud, Cloudflare Pages, Docker, GitHub Actions, CI/CD, Agile/Scrum, AWS (certification in progress)
AI-Assisted Coding: GitHub Copilot, Claude Code, Cursor, Codex, Gemini CLI, skill design

EDUCATION

B.Sc. in Computer Science (Co-op), Université de Sherbrooke, Dec 2026 • AWS Certified Solutions Architect (in progress)
